ADORNOS THERMOFORMING

Adornos is a spanish company specialized in advertising material for the point of sale (POS). We work everyday to adapt us to the constant market changes, keeping us competitive and leaders of the latest technologies. We have over 30 years of experience backed by the confidence of our customers, who have stopped worrying about the importation of items and the quality of them.

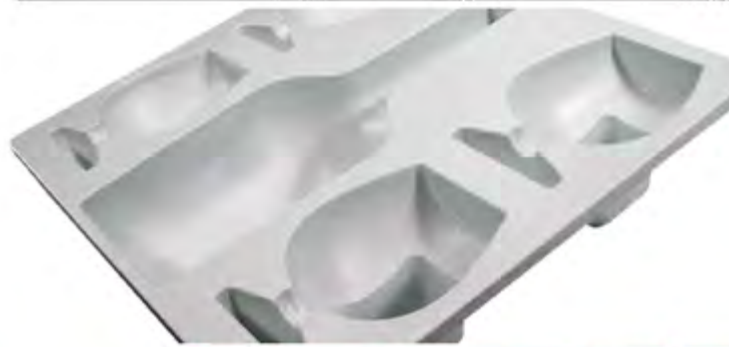

The manufacturing process is carried out entirely in-house. This absolute control over the production process able us to offer an extra quality in the production, handling all of our items and achieving high standards and efficient delivery deadline.

We manufacture promotional industrial material and POS Advertising. Many items and services can be provided by our company, however, it highlights the use of the thermoforming technique. We are pioneer in the use of thermoformed inks, one of the most cutting-edge technique at this time within the prototype design.

The thermoforming is a molding technique that is able to create volume over a plastic film by applying heat and vacuum in customized molds. This technique consists of several steps: it starts with the elaboration of a mold that adapts perfectly to the size and shape we want to create; the plastic sheet is heated to cover and fit this mold, then vacuuming. Once this plastic sheet is chilled, it gets light items with customized volumes.

Although in Adornos we can make pieces up to 1, 40 x 0, 90 cms area, do not hesitate to contact us no matter the size of your project. We always try to meet our customer needs.

Currently, through this thermoforming technique we keep innovating in the sector of Advertising at the Point of Sale (POS), creating new and more attractive shapes to our consumers. We manufacture pieces and parts for various sectors such as:

PACKING:

Fixing solutions for fragile and delicate products such as cosmetics & personal care, pharmaceutical and medical materials, perfumes, toys, watchmaking, etc.

CONSTRUCTION AND ELECTRONIC INDUSTRY:

Creating pieces of different sizes that will be part of final products in building materials or electronic industry.

HOUSEHOLD and OFFICE ITEMS:

Separators, organizers, trays, etc.

INDUSTRIAL:

Prototypes, automotive industry materials, sports items, pieces for fans, parts of refrigerators, etc.

POS ADVERTISING THERMOFORMED:

Speaking of shocking advertising, is talking about Advertising Thermoformed. We can achieve stunning reliefs with this technique, making the exhibitors and POS Advertising into something spectacular, from where it is impossible to look away, like giant soft drinks cans, objects and models coming out of posters, soccer balls turned into ice buckets... All things considered, the thermoformed technique can get different and flashy advertising messages, difficult to achieve with any other production technique.

POS Advertising Thermoformed will give personality and notoriety to your products and brand.

LARGUE FORMAT 150 x 100 cm
